Water Year 2003 Report

The water year started out to look as though we were going to have a below normal water year. However in early January we saw much above average snow pack ending up at 90-95 percent of the 30 year average. We saw a later than normal runoff that filled the reservoir in early May and it remained full until mid June.

This year with the late runoff and average flows we were able to run water in the river channel for about two weeks. As a result we are seeing improving levels in the ground water in the valley. The monitoring that is being done at the City's well has shown about 20 foot higher water levels that the past two years.

The irrigation deliveries started in mid May and continued though the summer. The rest of the summer continued to be dry and the runoff was somewhat below normal most of the storage water had been delivered by the end of August.

The total runoff for the Little Wood River Basin was 70,000 acre feet with 39,400 acre feet delivered to the farms and town lots. This is about 64% of the normal runoff (108,000 AF) and near average water use.

In 2003 we saw more ground converted to sprinkler irrigation again and the crop rotation was near normal. The district is now near 90% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.

With the funding that was received in 2002 the District and NRCS is in final stage of completing an environmental impact study for the possible upgrading of the system to a total enclosed pressurized system. The design engineering of the pressurized system should be completed in 2004.

Station LWOI - Little Wood River above High Five Creek, ID
