Water Year 2004 Report

The water year started out to look as though we were going to have a normal water year. However in late January we saw much below average snow pack ending up at 85-90 percent of the 30 year average. We saw a somewhat normal runoff that filled the reservoir in early May.

The irrigation deliveries started in mid May and continued though the summer. The rest of the summer continued to be somewhat cooler and the runoff was somewhat below normal most of the storage water had been delivered by the end of August.

The total runoff for the Little Wood River Basin was 59,800 acre feet with 38,400 acre feet delivered to the farms and town lots. This is about 55% of the normal runoff (108,000 AF) and near average water use.

In 2004 we saw more ground converted to sprinkler irrigation again and the crop rotation was near normal. The district is now over 90% sprinkler irrigated compared to less than 10% 20 years ago. Most of this is a result of the long drought that we saw in this area in the late 1980's and early 1990's. With the ever increasing cost of power for the pumps there is a real push to be able to put the whole district under a pressurized pipeline to both conserve water and energy. This is an ongoing project that could become reality within the next few years.

With the funding that was received in 2002 the District and NRCS is in final stage of completing an environmental impact study for the possible upgrading of the system to a total enclosed pressurized system. The design engineering of the pressurized system will be completed in the spring of 2005.
