Subj: STEWART GULCH WATER DISTRICT

Hi Ken -- Lori and I are attending the annual water district meeting on Monday, Feb. 6 at 10:00. I wondered if you have any update word on last fall pump testing in combination with data Ed Squires gave you. I imagine that will be asked if we have any conclusions yet about the data as it concerns how water shortages will be administered: cut off Terteling plus golf course to deliver Flora or just cut off golf course?

Is there anything to pass on at this time? Is there a target date where dept. analysis of data will be done? Or should I just tell them that will have results prior to next expected shortage period in about August of this year?

Thanks.....Steve

Steve,

I have not had the time to work on the Stewart Gulch data mainly because I have been real busy with the statewide monitoring program. My schedule looks pretty full until mid-March. So, I could plan on working up the data at about that time. I estimate that it will take me a few days to plot and analyze both data sets. Maybe we could tentatively set a date for early April to review the data, inhouse. Then we could decide how to present the data to the users. Does that sound okay with you?

That plan sounds real fine to me. Thanks for the information.
