

## Notes On Fish Creek Water District

1. To check the watermaster report, don't use the first column of the report (actual water delivered), use the figures from the previous year's report for the delivery data. Multiply the cost figure on this year's report by the delivery figures from last year's report to get total-cost figures, these will always be slightly different from the adopted budget, but no debits or credits will be shown.

So the budget will never be correct based on normal parameters. So if it's filled out & signed, approve it!
