Subj: Flow Down Sand Springs Gulch

Per a request from Mike Stubblefield, I just attempted to telephonically notify Carlene and Ray Smith of anticipated flows in Sand Springs Gulch. The telephone company lists their number as 366-2711. When I called this number the telephone rang about 4 times, then I heard a beep that sounded like a telephone answering machine beep but there was no voice message. I left a message that they could anticipate a flow of about 5 cfs beginning as soon as tomorrow afternoon, and that they should ensure that the channel from Sand Springs Gulch to Little Canyon Creek as it flows through their property is opened to convey these flows, which are to be made available via the lowering of Morrow Reservoir for failure-prevention purposes.

As I was writing this mail message, I received a call-back from Blair Clark, atty for the Smiths. He verified that the tel. no. above is correct. I advised him of the June 9, 10:00 am meeting date in response to his letter about deliveries from Sand Springs Gulch, and told him about the above information as well.

Mike is drafting a letter to be sent to the Smiths. Blair asked to be copied on the letter.

Dave
