

## Readme

This workbook contains a listing of water rights, permits and adjudication recommendations for basins 71, 72, 73, 74, and 75. The rights for each basin are listed on separate worksheets in this workbook and are sorted by source, owner, and priority date. The total acreage and maximum diversion rate for each source is totaled within each basin, both on the individual basin worksheets and on the worksheet labeled "Totals by Source and Basin".

The rights lists presented in this workbook were prepared on September 22, 2005 and represent information in the IDWR databases on that date. Please note that these basins are part of the Snake River Basin Adjudication and as such some of the information presented here may be subject to change, particularly rights in Basins 73, 74 and 75, where the SRBA process is currently very active.

Except for Basin 71, the total acres summed for groups of water rights by source are merely the sum of the acres under each right. The source group totals are not reduced for overlapping water rights, except in Basin 71. The total acres by source therefore may often be overstated for basins 72 through 75.

The lists for each basin include water rights, permits and Adjudication Recommendations for rights that do not fall under the domestic definitions as listed in Idaho Code 42-111.
