Re: Order Requiring Measuring Devices and Head gates in Water District No. 170.

Dear Mr. Jones:

This letter is a follow-up to our email correspondence this April, May, and June regarding measurement of your diversion for water right number 71-2091E from Smiley Creek. You had requested that we consider using the power consumption coefficient (PCC) method to monitor your usage under that water right from diversion SMC-2. Based on your description of the system, it is acceptable to use the PCC method for measuring this diversion. Please note that if, based on the PCC site visit information, the system configuration is such that the PCC method is not appropriate, an alternate method of measurement will be required and must be installed before diverting water in the 2008 irrigation season.

Please contact me to schedule a time when your system will be running so IDWR staff can complete the PCC calibration and verify that PCC is appropriate for this diversion.

I look forward to hearing from you to schedule the site visit. If you have any other questions, please feel free to call, email, or write me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Nick Miller', is written over a white background.
