PROPOSAL FOR WATER RIGHT NUMBER 71-00022A

Re: Headgate and measuring device
Point of diversion: T10N R13E S08
Quantity: .28 cfs

Because we are the only users of this ditch, and our allotment is so small, our situation is pretty simple. We propose to install both headgate and weir as per Nick Miller's recommendation. A headgate will be installed approximately 25 feet from point of diversion from Goat Creek. Excess water can return to Goat Creek from this point.

Approximately 30 feet further along the ditch, we will install a 12" rectangular weir, backed up by a pond sufficient to get an accurate measure.

Both will be installed prior to the '08 irrigating season.

Please note our change of address. We did not receive any information regarding the IDWR requirements prior to Nick's visit. I believe you were using the address from 1998.
