Re: Order Requiring Measuring Devices and Headgates in Water District 73

Dear Water User,

The Idaho Department of Water Resources (Department) issued an order dated November 18, 2002 requiring installation of measuring devices and head gates prior to the 2003 irrigation season for all diversions of water from the Pahsimeroi River and it's tributaries. This order required users submit plans of measuring devices and headgates to the Department on or before January 31, 2003. Relative to this requirement, the Department received a copy of a letter to you from the United States Fish and Wildlife Service (FWS), whereby the FWS expresses an interest in working with you on a project to install a fish screen on your diversion along with a properly functioning head gate and measuring device. This letter was sent to six potential Patterson Creek project users and four users relative to the Pahsimeroi River-Furey Lane project. Copies of these letters were attached by several of you to the Water Rights Plan Information Survey sheets in lieu of measuring device and headgate plans, and submitted to the Department in compliance with the January 31 deadline.

It is the Department's understanding that the two FWS projects referenced above will not be completed until sometime later this irrigation season and perhaps after the 2003 irrigation season. The Department understands that you may be using existing diversions included in the above referenced FWS projects this irrigation season before project completion. Although the Department supports the FWS projects, we are concerned that some water users may be out of compliance with the November 18, 2002 order requiring headgates and measuring devices by using existing diversions this year that are scheduled to be replaced under the FWS projects.

This letter is a reminder that all diversions of water from the Pahsimeroi River and tributaries must have acceptable measuring devices and headgates prior to diverting water for the 2003 irrigation season. Eventual replacement of an existing diversion by the FWS does not relieve you from the requirement of installing an adequate headgate and measuring device on that diversion if it is to be used during the 2003 irrigation season. The Department will provide technical assistance to ensure acceptable interim

measurement and headgate systems are in place during this irrigation season for those diversions scheduled for replacement under FWS projects.

If you have questions concerning this issue, please contact Steve Burrell or myself at the above location, or contact Bob Foster, IDWR Salmon Field Office at 208-756-6644.

Respectfully,

for
