Re: Water Measurement - Brailsford Ditch

Dear Mr. Mavencamp:

Enclosed is a copy of the 1995 Reporting Form for Open Channel Measurement which should be used for reporting measurement of the above referenced diversion. The form must be completed during 1995, and submitted to the Department on or before January 15, 1996. Please note that a label has been affixed to the report form identifying the diversion name and water source. The label should remain fixed on the report in order to identify the diversion and measuring device for which the report is being submitted.

As stated in my correspondence of March 14, 1995, the six foot rectangular weir near National Hatchery Road is acceptable for the purpose of measuring and reporting diversions to IDWR in 1995. This weir can not be relied upon however for the purpose of delivering water pursuant to calls for water or for regulating diversions among different users. IDWR still recommends that a permanent measuring device be installed at the head of the ditch to allow for full measurement of the ditch without losses and to improve regulation of Len Lewis Spring. Again, we realize that the Len Lewis Spring users may be working on necessary agreements for the installation of a measuring device and headworks.

Thanks again for your cooperation.

Sincerely,

Tim Luke
