

MEMORANDUM

TO: Water District 36-A File

FROM: TIM LUKE *TL*

DATE: August 30, 1993

RE: Water Rights and Diversions from Weatherby Springs, Three Springs and Hoagland Tunnel

=====

Following my summary of the measurements made at the Jones Fish Hatchery and from the above referenced springs (see memo to file dated August 27, 1993), I made a review of the water rights listed for these sources. These listings are attached to this memo. Three of the four attached listings identify existing decreed rights and any administrative rights from the three sources. A fourth listing identifies water rights from Hoagland Tunnel as currently recommended by the Department in the Snake River Basin Adjudication (SRBA) Basin 36 Director's Report. This latter report was generated because the Department's decreed and administrative computer water rights data base did not reflect that some rights in the New International decree listed both Weatherby Springs and the Hoagland Tunnel as a source of water. All the rights identified as being from Hoagland Tunnel on this attached abstract from the SRBA Director's Report database however were originally decreed from both Weatherby Springs and Hoagland Tunnel.

When the measurements were made on August 26, some of the flow from the Weatherby Springs complex was diverted and commingled with all of the flow from the Three Springs complex. The commingled water was used for both the fish hatchery and some irrigation diversions. All of the flow from Hoagland Tunnel was diverted directly for other irrigation uses. The total flow from all the springs on August 26 was about 50 cfs.

As per the attached lists, there are two decreed rights from Three Springs for irrigation purposes which are senior to the Jones' 1969 priority fish propagation right. The sum of the water right rate of diversion for the two rights is 7.7 cfs. The total irrigation water rights rate of diversion senior to the Jones right from Weatherby Springs and Hoagland Tunnel is 55.29 cfs. The total rate of diversion listed for those rights from Hoagland Tunnel which are senior to the Jones right in the Director's Report is 6.40 cfs. Subtraction of the 6.40 cfs for Hoagland Tunnel from the Weatherby Springs Water Master Report means that there is a total of 48.89 cfs under the senior irrigation rights.

Based on the August 26 measurements, all irrigation rights recommended from Hoagland Tunnel, except a portion of the most junior right, was being filled. Since some water from Weatherby

Springs and Three Springs was commingled, it is easier to compare the combined flow of Weatherby and Three Springs, which was 40.62 cfs on August 26, with the total senior irrigation rights from the two sources, which is 56.59 cfs.

Since a portion of the total fish hatchery diversion was overflow water from the irrigation pipeline diversion from Weatherby and Three springs, it may be assumed that the irrigation demands with rights which are filled from this pipeline were satisfied. Also, it may be assumed that all other irrigation demands with rights from Weatherby Springs were satisfied since the re-diversion of water from the hatchery to the Bar-S irrigation ditch exceeded the minimum 325 inches (6.5 cfs) which is required to maintain that ditch.

In summation, the August 26 measurements indicate that the irrigation diversions from the springs covered by the senior water rights did not exceed the total amount of water which could have been diverted under those rights. The remaining flow from the springs not diverted directly for irrigation was available for use at the hatchery. Due to the limited available supply of flow from the springs and some irrigation use by senior water rights holders, only a portion of the 1969 priority Jones water right license for 73.05 cfs (license no. 36-7071) could be filled.
