

Water District 02 (Milner to Murphy) 2019 Annual Delivery Report

OVERVIEW

Water District 02 (WD02) administers diversions from the Snake River below Milner Dam to the Murphy Gage below Swan Falls Dam. Figure 2 in Appendix A shows the distribution and geographic extent of WD02 diversions. There are 52 diversions equipped with radio telemetry and dataloggers. There are an additional 5 diversions that are equipped with dataloggers only. Dataloggers record diversion or discharge rates at the larger diversions in WD02. These rates are typically expressed in cubic feet per second (cfs).

Totalized volume data for all diversions are presented in Table 1 (acre feet and 24 hour cfs). Average daily diversion rates (cfs) for sites with dataloggers are presented in Appendix B. The proration of assessments to be billed to the individual water users in February of 2020, is based on the three-year average of the volumes of water delivered in 2017, 2018, and 2019 (presented in this report).

WD02 and IDWR staff efforts during 2019 included:

- working with users on measurement device operation and maintenance;
- reviewing and documenting Water Supply Bank transactions within WD02;
- reviewing water right transfer and permit applications;
- conducting measurements to evaluate accuracy of existing measuring devices; and
- collecting data at all measured diversions three times in 2019.

DATA

Some data gaps occurred in 2019. Data gaps result when a measuring device or associated recording equipment becomes inoperable. Missing measurement data was estimated and added to the total volume diverted.

The cumulative total of both measured and estimated diversions was approximately 483,083 acre-feet during 2019 (about 15,087 acre-feet less than 2018).

The totaled volume shown in the Average Daily Diversion Rate reports (Appendix B) may differ from the volume shown in Table 1, because the volumes in Table 1 include estimations for missing data. Volume totals for water rights having a year-round season of use are accrued between November 15 and November 14 of each year, more or less. Average Daily Diversion Rate reports were created using Aquarius-Time Series Software and are presented in alphabetical order by diversion name.

Table 1: 2019 Measured Deliveries for Diversions in Water District 02

Delivery volumes are presented in acre-feet (ac-ft) and 24-hr cfs

2019 FLOWS AT MURPHY GAGE

Unadjusted Average Daily Flows (UADF) on the Snake River at the Murphy Gaging station were provided by the USGS surface water data for Idaho (USGS, 2019). Adjusted average daily flows (AADF) were calculated by IDWR staff using the reservoir-stage method to compensate for fluctuations caused by hydropower operations of Idaho Power. A three-day moving average of the AADF was calculated and is reported in Figure 3 consistent with the Final Order issued October 27th, 2014 (DWR, 2014).

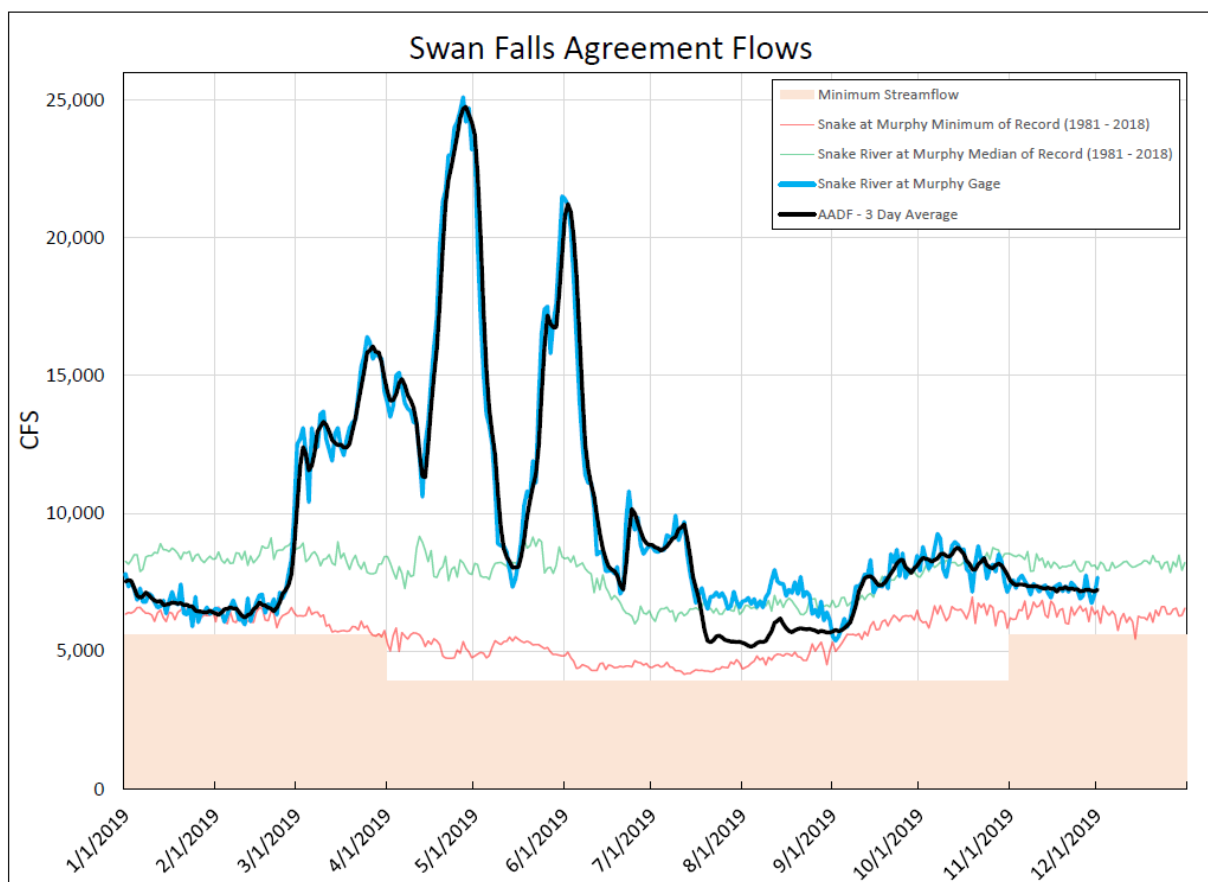

Figure 1. Hydrograph of Snake River below Swan Falls Dam. Unadjusted Average Daily Flow (UADF), 3 day average of Adjusted Average Daily Flow (AADF) and Minimum Stream Flow for 2019 at Murphy Gaging station.

Department of Water Resources, State of Idaho- Final Order Regarding Measuring and Reporting The “Average Daily Flow” At The Murphy Gaging Station (October 27, 2014) (Spackman, Gary).

APPENDIX A: Map of Water District 02

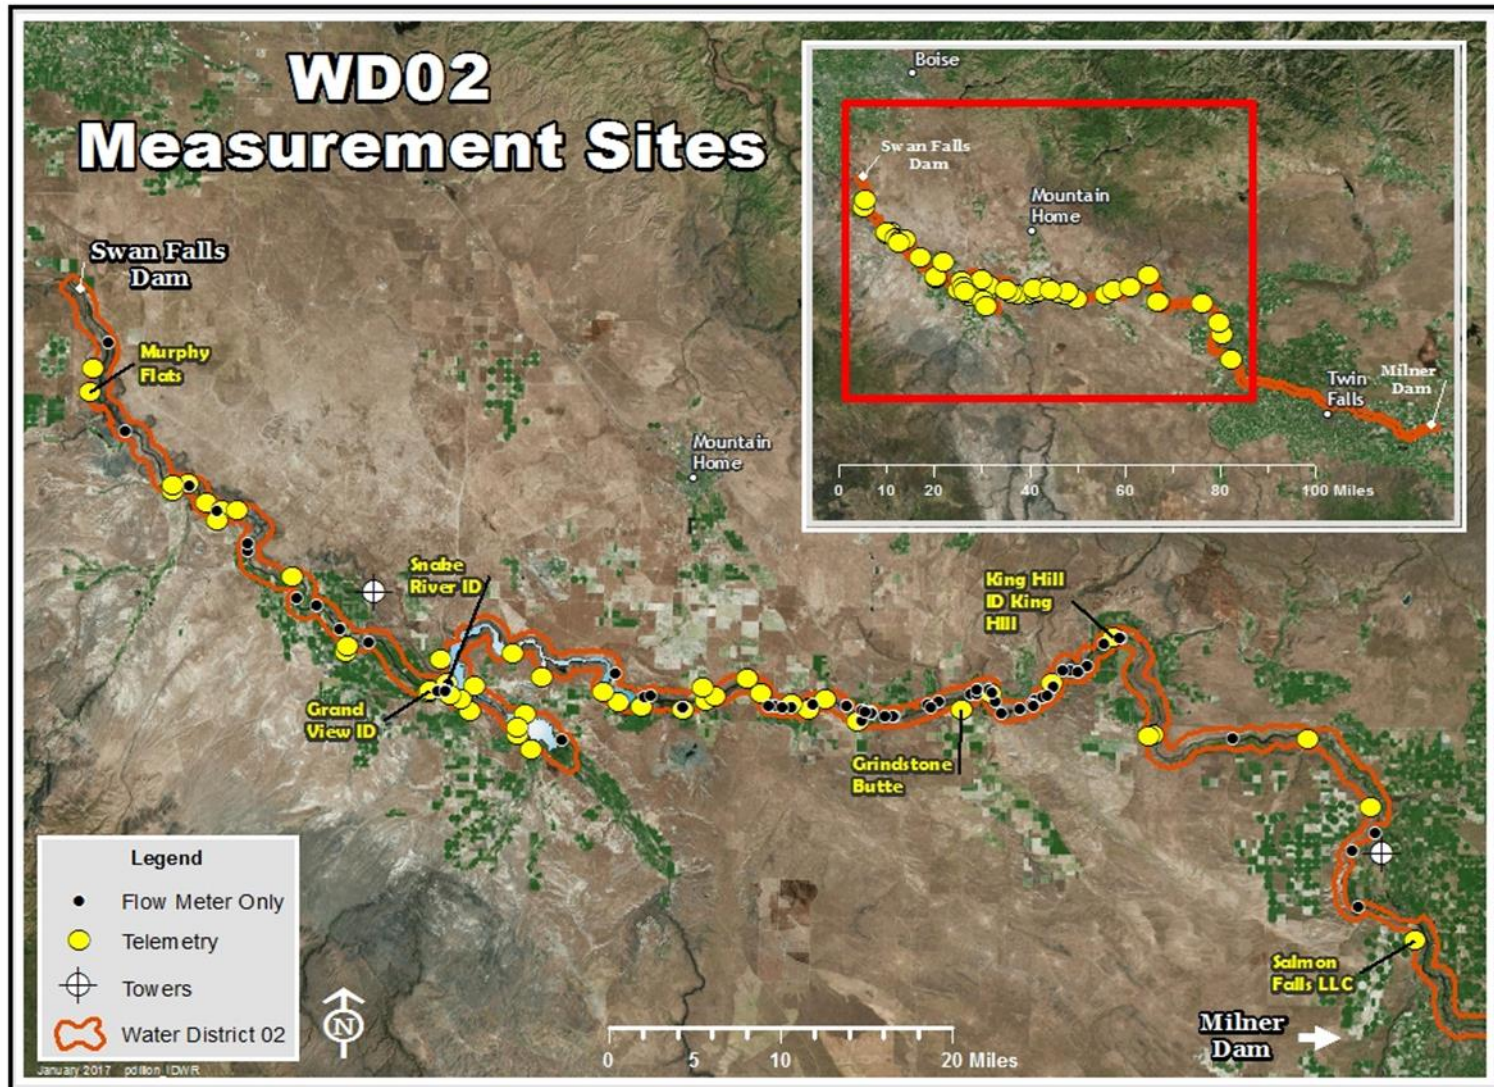

Figure 2. Map of Water District 02 boundaries and measurement sites.

APPENDIX B: Average Daily Diversion Rate Reports for Water District 02

This appendix shows diversion data for measurement locations equipped with a datalogger. The totalized annual volume in these reports may differ from that reported in Table 1, as the reported volumes in Table 1 include estimates for missing data. The reports in Appendix B show the average daily diversion rates throughout the irrigation season for each of these diversions. Average daily diversion rates are in cubic feet per second (cfs) and the total volume is in acre-feet (AF).

These reports were created in the Aquarius-Time Series Software and are presented in alphabetical order by diversion name.
