RE: Installation of a Lockable Control Device on the Crandelmire Pipe from the Martin-Curren Tunnel

Mr. and Mrs. Morris,

As per the records of Water District 36-A, you are the owners of the following water rights diverted from the Martin-Curren Tunnel via the Crandelmire Pipe:

36-134 D	36-135 D	36-10141 A
36-134 E	36-135 E	36-10141 B

As the Water District 36-A watermaster, I hereby request you to install a lockable control valve on the Crandelmire Pipe from the Martin Curren Tunnel at your earliest convenience but no later than April 15, 2016. Please install the lockable valve upstream of the new meter located at the vault. The valve should be installed a distance of at least three pipe diameters upstream of the meter. A gear operated butterfly valve would be satisfactory for this purpose.

Also, please notify me seven (7) days in advance of any "call" for diversion of water, or any change in diversion flow, of the aforementioned water rights so that I have sufficient time to coordinate your needs with those of Rangen and the other water users on the system.

A copy of this request has been forwarded to the Idaho Department of Water Resources. If the valve is not installed as requested, I will request the issuance of an order from the Department pursuant to Idaho Code § 42-701.

Sincerely,

Frank Erwin
